Name:

In-Class Activity – Animated Map of 2011 Worldwide Earthquakes

| We will be watching an animated graphic showing the earthquake data form 2011. Answer the following questions. |
|--|
| 1. What happened in March? How was this event reflected in the line showing the accumulated number of earthquakes? |
| |
| |
| |
| 2. After June, observe the ocean floor (the locations of earthquakes from earlier in the year). Are the earthquakes randomly distributed on the seafloor? How would you describe the distribution? |
| |
| |
| |
| 3. Similar to question #2, are earthquakes on continents randomly distributed? How would you describe the distribution of |
| earthquakes? |
| |
| |
| |
| 4. Some parts of the Earth are clearly far more prone to earthquakes than others. Which continent is practically free of |
| earthquakes (look carefully!)? |
| |
| |
