# Cardiovascular System, Disease, and Health

# Preventable Deaths in USA (1990-2000)

<b>Causes</b>	<b># (%) in 1990</b>	<b># (%) in 2000</b>
<b>Tobacco</b>	<b>400,000 (19)</b>	<b>435,000 (18)</b>
<b>Poor diet and physical activity (obesity)</b>	<b>300,000 (14)</b>	<b>400,000 (17)</b>
<b>Alcohol consumption</b>	<b>100,000 (5)</b>	<b>85,000 (4)</b>
<b>Microbial agents</b>	<b>90,000 (4)</b>	<b>75,000 (3)</b>
<b>Toxic agents</b>	<b>60,000 (3)</b>	<b>55,000 (2)</b>
<b>Motor vehicle accidents</b>	<b>25,000 (1)</b>	<b>43,000 (2)</b>
<b>Firearms</b>	<b>35,000 (2)</b>	<b>29,000 (1)</b>
<b>Sexual behavior</b>	<b>30,000 (1)</b>	<b>20,000 (&lt;1)</b>
<b>Illicit drug use</b>	<b>20,000 (&lt;1)</b>	<b>17,000 (&lt;1)</b>
<b>Total</b>	<b>1,060,000 (50*)</b>	<b>1,159,000 (48%*)</b>

Mokdad AH et al. *JAMA* 2004;291:1238-1245

# Cardiovascular Diseases

---

- **Myocardial Infarction**
  - A fancy word for a heart attack
- **Stroke**
  - Blood flow to the brain is cut off
- **Abdominal aneurysms**
  - Enlarged aorta (main supply of blood to the body)
- **Lower limb ischemia**
  - Severe blockage of blood flow in lower limbs

These largely influence the morbidity and mortality in Western style populations

# Circulatory System

# Circulatory System

## Blood Flow in Human Circulatory System

# Circulatory System

---

# O<sub>2</sub>/CO<sub>2</sub> Transport @ Muscle Tissue

**Capillary = bottleneck**

Energy Production  
(**aerobic** respiration)

Immediate  
use

Storage

Myoglobin

CO<sub>2</sub> Exchange

Helps buffer the blood pH<sub>7</sub>

# O<sub>2</sub>/CO<sub>2</sub> Transport @ Lungs

**Capillary = bottleneck**

# Types of Lipid Molecules

## Cholesterol

## Triglycerides

## Saturated Fatty Acid

## Unsaturated Fatty Acid

# The Good, the Bad and the Ugly

## Chylomicrons

- Dietary fat/cholesterol transport to cells
- Originate in intestinal mucosa cells
- 1-2% protein, 85-88% triglycerides, ~8% phospholipids, ~3% cholesteryl esters and ~1% cholesterol

Chylomicron

## LDL (Low Density Lipoprotein) – “Bad” Cholesterol

- Cholesterol transport from liver to cells
- One of the lipoproteins (B-100) is recognized by LDL receptors. This triggers encapsulation of LDL and release of cholesterol to be used in the plasma membrane
- 20-22% protein, 10-15% triglycerides, 20-28% phospholipids, 37-48% cholesteryl esters, and 8-10% cholesterol

## HDL (High Density Lipoprotein)

- Cholesterol transport to liver for degradation (or recycling)
- Cholesterol “scavenger”
- 55% protein, 3-15% triglycerides, 26-46% phospholipids, 15-30% cholesteryl esters, and 2-10% cholesterol

# Fat Particles

Tekening: Auke Herrema

# Dietary Lipid Digestion

*Bile Salts: Polar Derivatives of Cholesterol – made in liver and stored in gallbladder*

*Required for dietary fat absorption (as well as absorption of Vitamins A, D, E, and K)*

*Facilitated by Bile Salts*

# Lipid Uptake and Transport

# Atherosclerosis

---

Atherosclerosis is a disease process which is triggered by sometimes subtle physical or chemical insults to the endothelial cell layer of arteries.

# Atherosclerosis

---

# Atherosclerosis

---

**Response to Injury** theory – Atherogenesis is triggered in response to some **external stress**

- Physical injury or stress as a result of direct trauma or hypertension
- Turbulent blood flow, for example, where arteries branch
- Circulation of reactive oxygen species (free radicals), e.g., from smoking or air pollutants
- Hyperlipidemia (high blood concentrations of LDL or VLDL)
- Chronically elevated blood glucose levels

# Atherosclerosis

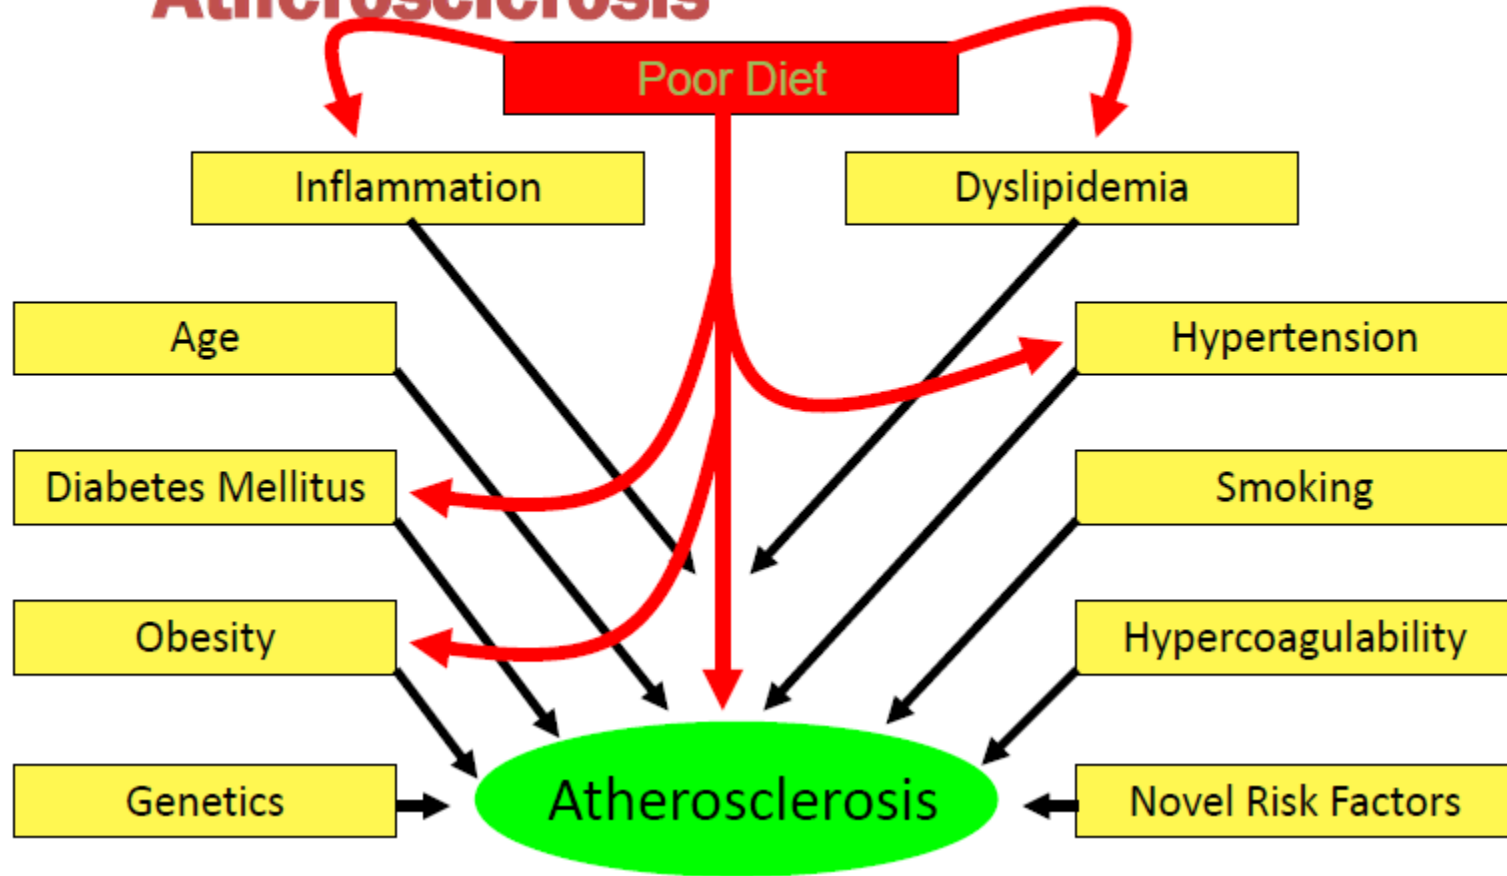

# Atherosclerosis

# Atherosclerosis

## Some Factors Affecting Atherosclerosis

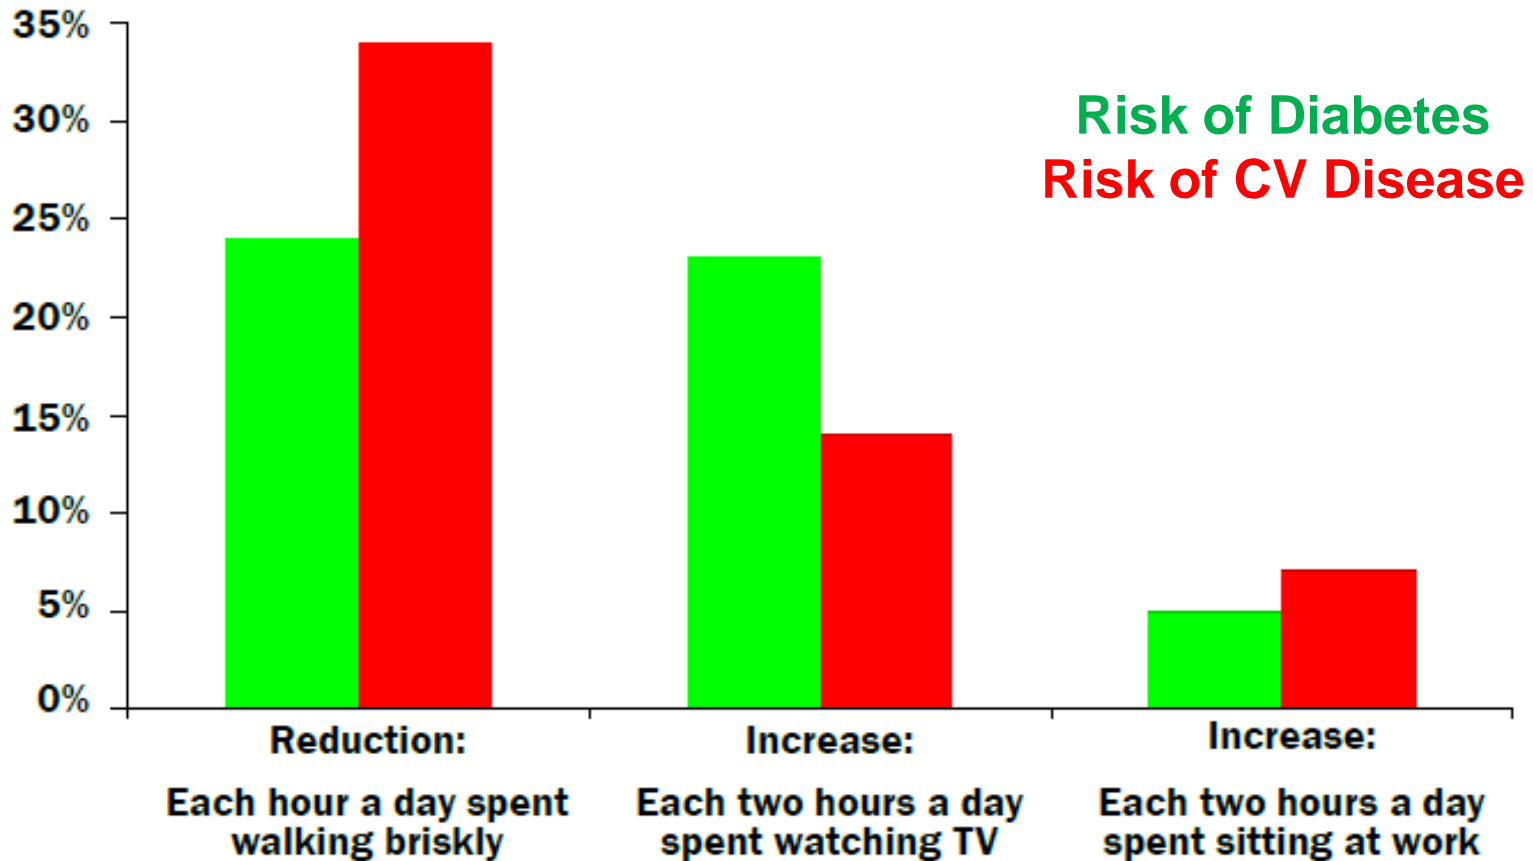

# Dietary Lipid Digestion – important organs

---

# Lipid Uptake and Transport

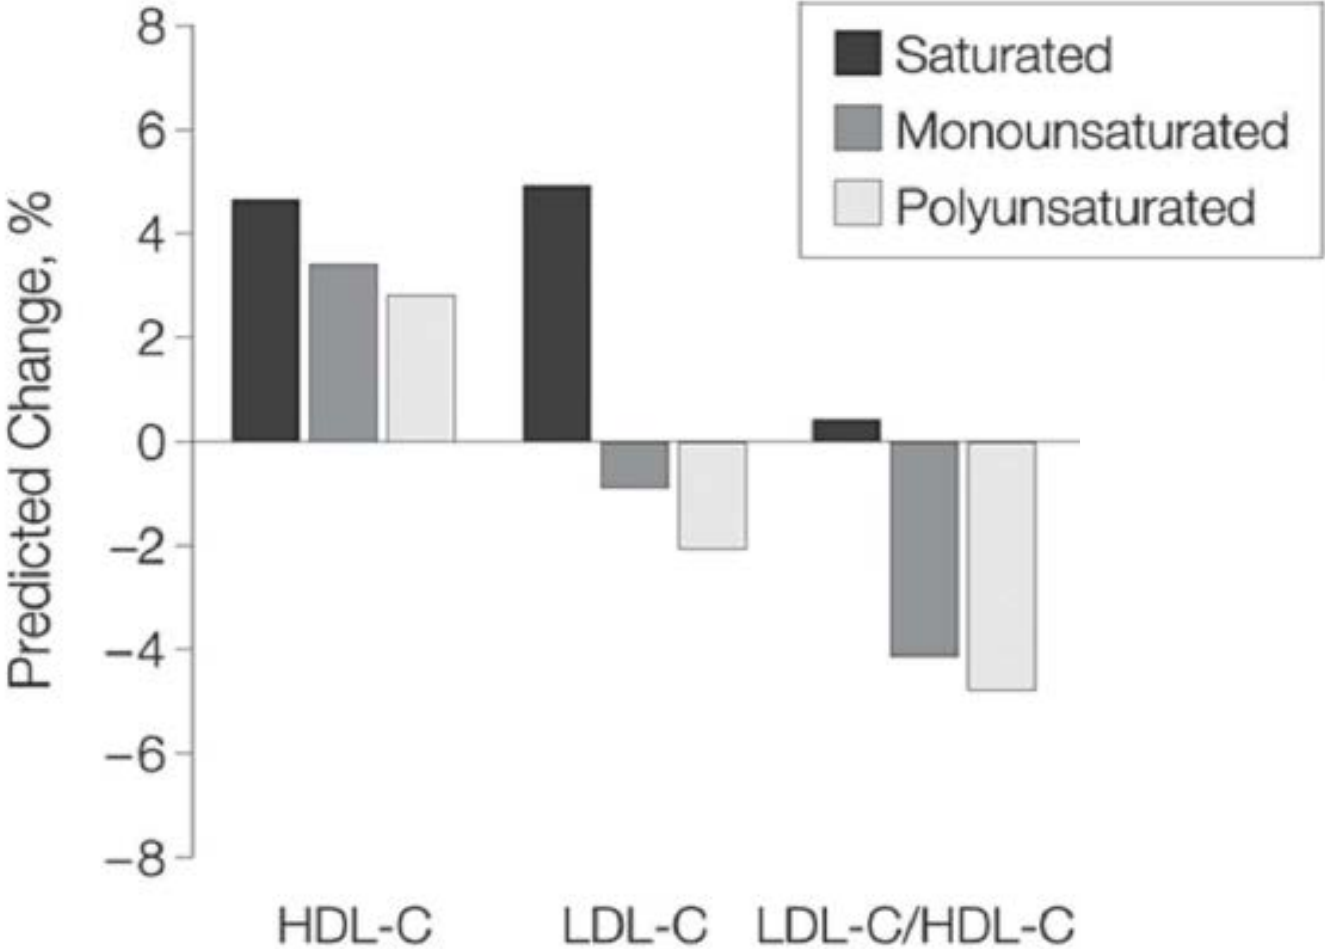

Make a prediction: how will exercise effect risk of obesity and cardiovascular disease?

Make a prediction: what will happen to LDL and HDL levels when 5% of dietary carbohydrates are replaced with:

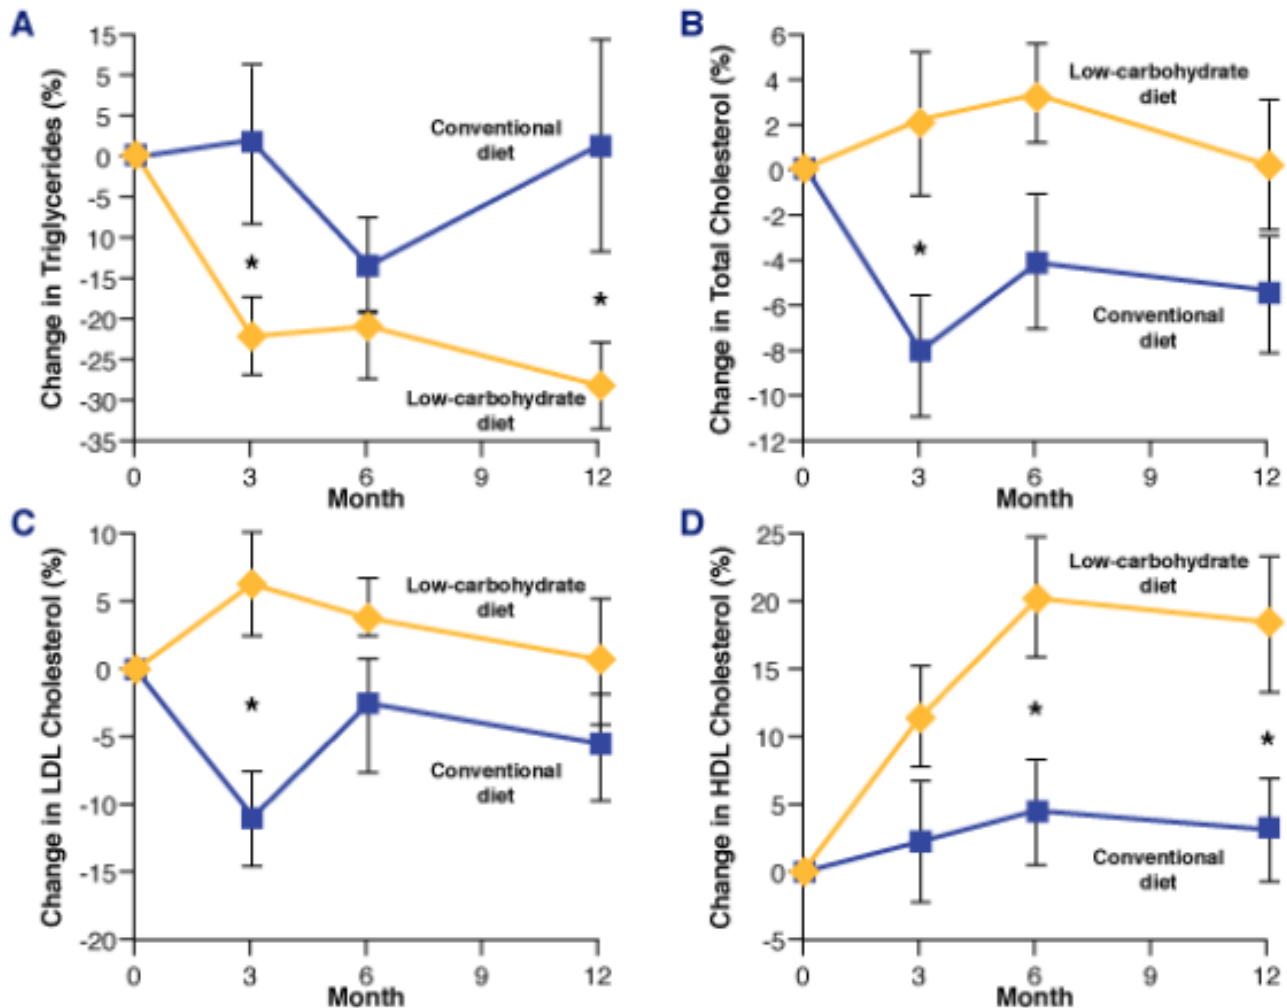

### Saturated Fatty Acids

### Unsaturated Fatty Acids

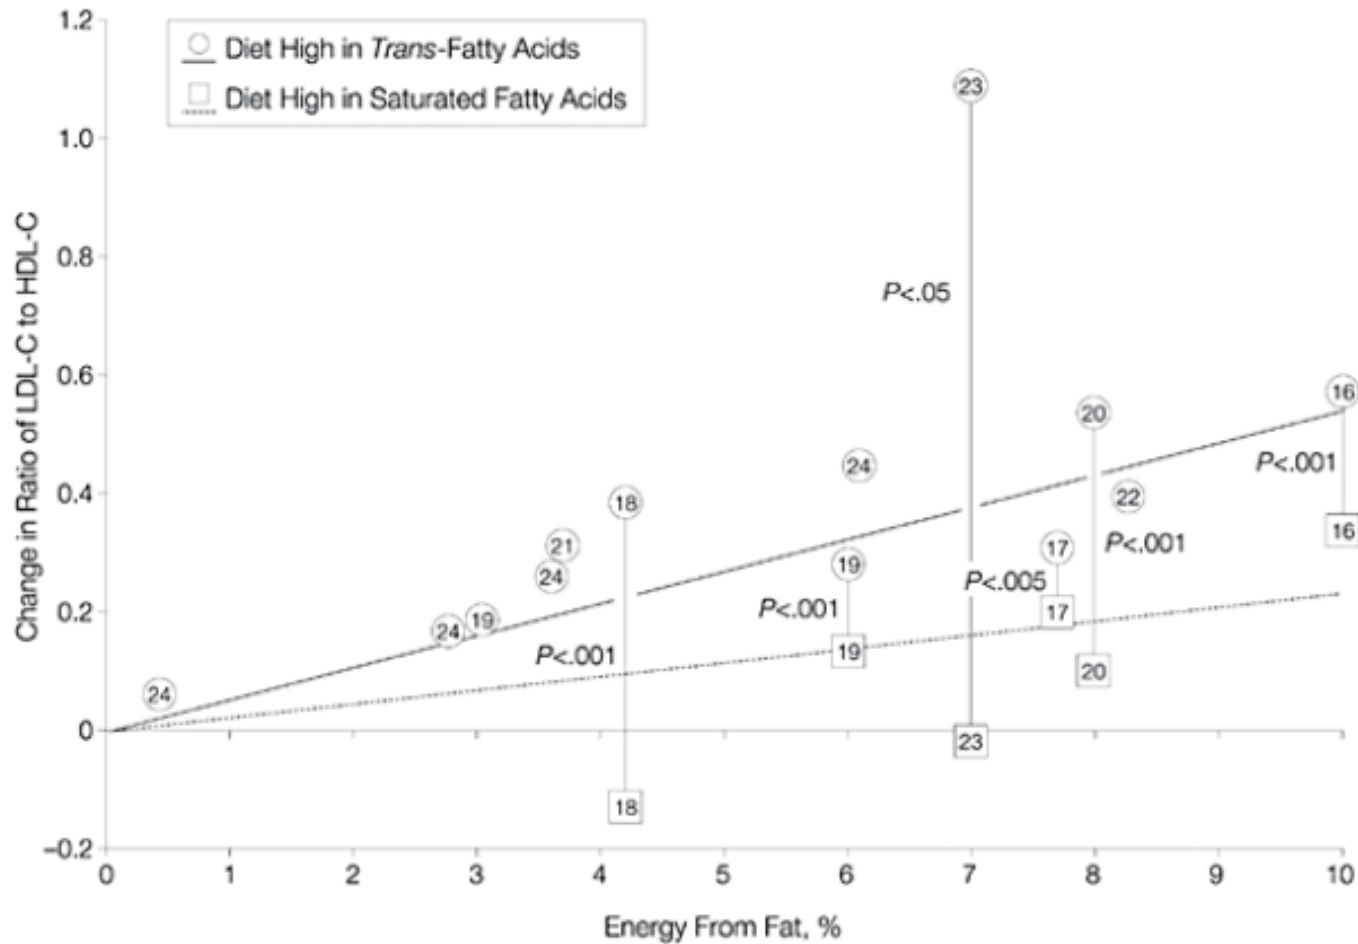

# Diet and Lipid Levels

How do you think a low carbohydrate diet will influence the levels of cholesterol, LDL, and HDL?

# Trans-fatty acids increase LDL and lower HDL relative to cis-unsaturated fatty acids.

Ascherio A, et al. *N Engl J Med.*1999;340:1994-1998.
