Constants, Conversion Factors and Equations

Constants and Conversion Factors:

$$h = 6.626 \times 10^{-34} \text{ J} \cdot \text{s}$$

$$c = 2.9979 \times 10^8 \frac{\text{m}}{\text{s}}$$

$$1 J = 1 \frac{kg*m^2}{s^2}$$

Equations:

$$d = \frac{m}{V}$$

$$v = \frac{c}{\lambda}$$

$$E_{\rm photon} = h \nu$$

$$E_{\rm K}$$
 (ejected electron) = $E_{\rm photon}$ - ϕ

$$E_K = \frac{1}{2}mv^2$$

$$\Delta E = -2.178 \times 10^{-18} J \left(\frac{1}{n_f^2} - \frac{1}{n_i^2} \right)$$

$$E_{\mathrm{photon}} = |\Delta E|$$

$$\lambda_{\text{matter}} = \frac{h}{m v}$$
